

Curved Side Covered Hopper Car for Grain Service

FreightCar America's 5200 cubic foot capacity covered hopper car is a curved sided car designed to meet requirements for the transport of grain. This car incorporates the latest design and manufacturing techniques for a high quality, reliable railcar. It features a through center sill (FreightCar America's patented, high strength cold-rolled steel center sill), welded curved side and curved roof with trough hatches. It also has standard 30 X 30" bolted on discharge gates. Quality and reliability is assured through a modern manufacturing process at FreightCar America's newest manufacturing facility.

FreightCar America has been a leader in engineering and development of innovative freight car designs for over a century. Contact us to find out more about purchase or lease options for this car and other FreightCar America products.
